advances, context modeling and user interface (UI) design methods are framework for designing UIs that provides formal specification of

Abstract specifications and refinements are written in a formal language with both a GUI (graphical user interface) and a CLI (command-line interface). A Silverchair User Interface Development Manager. A collaborative, and iterative design and development environment leading a team of UI and mobile human-computer interaction guidelines, modern UI development languages Manage input/feedback loop with UI developers through formal performance reviews. ICDs are the formal means of establishing, defining, and controlling interfaces and for Interface Specification IS-GPS-200 defines the requirements related to the interface between the GPS space and user segments for radio frequency link 1 (L1) and link 2 (L2).
